

The Animal Kingdom

(level - basic)

- Mammals
- Birds, Worms
- Fish, Molluscs
- Reptiles
- Amphibians
- Invertebrates
- Protozoa
- Coelenterates
- Echinoderms
- Vertebrates
- Millipedes
- Arthropods
- Insects
- Crustaceans
- Arachnids
- Centipedes

Across

4. These animals have feathers (5)
6. A group of animal species which have jointed legs and a hard body covering (10)
7. Animals without a backbone (13)
12. Crabs, lobsters, prawns and crayfish, for example (11)
14. Characterised by scales, gills and a backbone (4)
15. Scaly bodied vertebrates that live on land (8)
16. Worm-like arthropods with many pairs of legs (but not a thousand), and which feed on rotting plant material (10)
17. This group has members which are flat, round and segmented (5)
18. Spiders, scorpions and ticks, for example (9)

Down

1. Vertebrates which can survive on land and in water (10)
2. Sea anemones, jelly-fish and coral, for example (13)
3. Animals with a backbone (11)
5. Arthropods with 6 legs and usually wings (7)
8. Starfish, sea urchins and sea cucumbers, for example (11)
9. Snails, slugs, oysters, and the octopus are examples of this soft-bodied group of animals (8)
10. These worm-like arthropods are actually venomous predators (10)
11. A group of warm-blooded vertebrates which suckle their young (7)
13. Single-celled organisms (8)
